

AR bench-test launch plaque — 50 × 50 mm

- 1. Print at **100% scale / "Actual Size"** — never "Fit to page".
- 2. Verify the calibration bar below measures **exactly 100 mm** with a ruler. If it doesn't, the plaque is unusable: reprint (physicalTargetWidthMeters = 0.05 depends on it).
- 3. Cut along the crop marks; tape the plaque **dead flat** on the box cover at the measured spot, north arrow (▲N) pointing at the dominos.

calibration bar — must measure exactly 100 mm (ticks every 10 mm)
